

postgres in docker

```
@rem start  
application.cmd start path\to\file-storage  
  
@rem stop  
application.cmd stop  
  
@rem cleanup  
application.cmd clean path\to\file-storage
```

download: [application.cmd](#)

h2 in-memory database

```
@rem start  
application-h2.cmd start path\to\file-storage  
  
@rem stop  
application-h2.cmd stop  
  
@rem cleanup  
application-h2.cmd clean path\to\file-storage
```

download: [application-h2.cmd](#)

note: binaries `wget`, `docker-compose` and of course `jre` (binaries: `java` and `jps`) are required
